Voyager

A Unique Solution for Caregivers

The Guardian Voyager and Easytrack combine to form a unique portable overhead lifting solution for the home.

Ceiling lifts solve the problems that traditional floor-based lifts have presented, such as difficulty maneuvering over thick carpeting, turning in tight spots and the need for two people to safely operate them. Although ceiling lifts have been available, they typically require permanent and expensive modifications to the home thus turning it into an institutional setting. Now, with the Guardian Voyager and Easytrack Lift System, caregivers can easily transfer family members or loved ones from a bed to a wheelchair, a wheelchair to a bath or anywhere else within the range of the Easytrack System without permanently defacing their homes. A Guardian Voyager with Easytrack System can be the enabling factor that allows the home to be the primary place for care.

A Provider's Answer

The combination of the Voyager and the Easytrack has taken patient handling to the next generation. As the provider of solutions for homecare needs, you now have the ability to solve your customers' lifting and transfer problems right from your storeroom with no special training or installation skills and no customization of components. The Easytrack can be set up in just minutes with no tools required and taken down just as easily. The flexibility of the design allows you to stock a couple of units and accommodate many situations, both permanent and temporary, quickly.

GUARDIAN®

A unique overhead portable track system for the Voyager lift that can be set up in less than 5 minutes by one person using no tools.

- **Multi-Post Options** The 2, 3 or 4 post options allow the Easytrack to solve lifting and transferring problems in nearly every room layout.
- **Easy Set-Up** The lightweight components and design allow for quick, easy set-up by a single person in less than five minutes.
- **Non-Permanent Installation** The unique floor-to-ceiling spring-loaded design does not require permanent installation or alterations to the ceiling or electrical, thus saving the homeowner considerable money while maintaining the décor of the home.
- **Portable** The lightweight aluminum Easytrack can be transported along with the Voyager lift providing a temporary solution when traveling. An optional carry bag is available.
- **Small Footprint** The small feet of the Easytrack allow use even in the smallest bedroom or bathroom where a conventional floor lifter could not be maneuvered.
- **Easy-Glide Rail** The design of the telescopic rail allows caregivers to smoothly glide the person being transferred without strain or risk of back injury.
- **Telescopic Rail** Unlike fixed-length tracks, the Easytrack can be extended to accommodate different locations, eliminating the need for in-home surveys and customization.
- **Telescopic Post** The Easytrack can be used with ceiling heights from 7'-9'.
- **Rotating Rail Connection** This allows the rail or post to be positioned at any angle as well as close to walls or obstructions.
- **Patented Safety Systems** A number of unique safety systems have been designed into the Easytrack to ensure peace of mind. These include preventing the post from losing grip if the floor or ceiling flexes, preventing the post from being lowered if the rail is still connected and preventing the rail from disconnecting from the post.
- **Bubble Level** A snap-on level is included for precise post set-up.

Set up in Four Easy Steps

Extend posts and rotate to lock into place.

Fix one end of rail onto post.

Extend rail to required length and fix rail onto second post.

Fix end cap to lock rail into place.

Two Post System

The 2 post configuration is ideal for a simple lift in or out of a bed. It allows the person to be moved in one direction along the rail. Also available with a tub bracket which allows one post to be mounted onto a bathtub ledge (minimum 3" ledge at ends required).

Four Post System

The 4 post system operates like a traditional xy system, allowing for complete coverage anywhere within the 4-post area. The 4 post system is not telescopic.

Three Post System with Bath Bracket

The 3 post configuration provides access in two directions, allowing lifts or transfers anywhere within the triangle area. Can work great in bathrooms allowing access to tub, sink and toilet. Also available with a tub bracket which allows one post to be mounted onto a bathtub ledge (minimum 3" ledge at ends required).

GUARDIAN®

The lightest portable lift on the market today.

- **Lightweight** The Voyager weighs only 12 pounds, including battery, allowing for portability and easy attachment to Easytrack trolley.
- **Heavy-duty Capacity** The Voyager lifts a person up to 440 pounds.
- **Quick Release Strap** This patented feature allows instant repositioning of the Voyager by extending the strap with the quick release and hooking it onto the trolley. It prevents ever having to lift the Voyager onto the rail, thus saving time and battery power, as well as caregiver injuries.
- **Rechargeable and Removable Battery** Battery recharges in 2 hours and handles approximately 30 lifts with a full charge. Storing the battery in the charger ensures the lift is never out of action.
- **Safety Features** Emergency stop, lower and strap twist prevention help ensure safety in every lift.
- **Audible Low Battery Indicator** A warning signal helps ensure the battery will not run out at a critical moment.
- **Soft Start and Stop** Smooth, gentle movement ensures the person being transferred is safe and comfortable.
- **Dual Controls** Easily accessible dual controls allow for effortless up/down movement. An optional handset is available.
- **Quiet Operation** The Voyager is noise-free for user comfort.
- **Spreader Bar** The secure spreader bar design is compatible with Guardian 90000 series slings.

Guardian Slings

The Guardian slings, designed especially for the Voyager lift, are not only durable but also easy to clean, fast drying and comfortable. All slings are designed to be installed and removed quickly without lifting the person. With a choice of styles and sizes, you'll find a sling to accommodate most users' needs. Choose the sling that best meets the needs of the person being transferred while also considering their physical ability and size.

Hammock Sling

Our most universal sling, the Hammock Sling is a mesh type material that dries quickly but is soft and pliable. The sling has a built-in head support and a unique strap system that keeps the person secure in the sling. A special polyester fabric in the seat area helps to reduce friction and makes the sling easy to place around a person in a chair without lifting the person. This is the best choice for most situations including bathing.

Hammock 6 Strap Sling

A variation of the Hammock Sling, this sling provides extra security and a tighter fit for persons who are low muscle tone or who would prefer a more secure feeling. The head support is tighter and two extra straps on the side provide more lateral support.

Quick-fit Sling

The Quick-fit Sling is specially designed for persons who are stocky or obese. Padding around the buttocks and leg area helps to provide extra support comfortably. This sling does not have a head support.

Hygienic Sling

This sling is excellent for changing incontinence pads or for transfers onto a toilet as it provides an open area from the middle of the back to the middle of the thigh.
